

## Card Project

Time and again, Zoom Technologies has proved that it is at the forefront of designing and executing pioneering solutions in networking. This time too it has bagged one of the most prestigious projects.

Zoom Technologies set up India's biggest WAN network for the Department of Registration and Stamps, Andhra Pradesh, as part of the CARD project.

The CARD (Computer Aided Registration of Documents) project is one of the most ambitious and prestigious undertakings conceived by the Andhra Pradesh government as part of its e-governance initiative.

The CARD project connects 400 locations across the state of Andhra Pradesh to its main office in Hyderabad. Thanks to the network engineers at Zoom, registration made in any location of the state will now be automatically updated to the main database server in Hyderabad.

This is the very first project of its kind to be implemented in India. All the District Registrar and Sub Registrar Offices are now connected to the Head office through a giant WAN network of leased lines. Network security considerations were also taken care of by Zoom by setting up firewalls and VPNs.

Zoom has designed an elegant solution incorporating cutting-edge technology so that all the requirements are met in the most robust secure and reliable manner.

Zoom has also implemented a number of turnkey projects for organizations like NRSA, IDRBT, MCH, APCPDCL, CDFD to name few.
